

Athreyas Yelishetti

Senior Staff Site Reliability Engineer · Zscaler · Bay Area, California

Senior Staff SRE with 15 years in security and infrastructure, from Zscaler's zero-trust platform to customer onboarding and production delivery at Akamai. Moving toward solutions architecture and forward deployment: understanding customer constraints, designing the system, and owning it into production.

EXPERIENCE

● ZSCALER

2021-12 → PRESENT · 4Y 10M

Senior Staff Site Reliability Engineer

- Provision and operate the inline zero-trust proxy fleet across **100+ data centers**, on Zscaler-owned Linux and BSD hardware.
- Re-architected provisioning into a self-executing Python init package, now in production, cutting full-cluster setup from **36–40 hours** to **6–8 hours**.
- Build and maintain Python and Ansible automation for remote provisioning and build delivery; add production capacity behind existing customer-facing virtual IPs.

● AKAMAI TECHNOLOGIES

2017-01 → 2021-12 · 4Y 11M

Senior Site Reliability Engineer

2019-06 → 2021-12 · 2Y 6M

- Unblocked stalled customer onboardings, working through application configuration until production.
- Ran multi-region AWS infrastructure for Enterprise Application Access with Terraform, Ansible and Elasticsearch.
- Structured data-path upgrades to avoid customer traffic interruptions, organized management-path rollouts, and added SSO/RBAC to internal tooling and cloud instances.

Escalation Engineer

2017-01 → 2019-06 · 2Y 5M

- Led **25–30 customer onboardings** through production and worked **10+ proofs of concept** end to end.
- Supported **60–80 customers** after onboarding; **10–15 asked for me** on their calls.
- Owned complex Enterprise Application Access escalations through closure, including legacy-app access, SSO with Okta/Ping, desktop clients and browser-based remote desktop.
- Raised customer onboarding requirements that became product features in later releases.

● SOFTCOM INC

2016-11 → 2016-12 · 1M

Operations & Management Engineer

Contract with the US Patent and Trademark Office. Maintained Linux/Windows servers for messaging, image conversion and translation; automated server and backup operations.

● REDCENTRIC PLC

2013-03 → 2015-08 · 2Y 5M

Senior Application Support Engineer

Managed and supported enterprise applications hosted by clients, traced transaction failures to root cause, and built Nagios monitoring and routine automation.

Support Engineer

Developed, tested and published Citrix App Store SSO connectors; configured AD, certificate services and SAML for identity-management products.

SIDE CHANNEL

● HOME LAB

ONGOING · PRIVATE

Self-hosted infrastructure

Self-hosted infrastructure for testing runtimes, networking and deployment patterns. Built a public status pipeline for the private network: push-only updates, allowlisted labels and fail-closed address filtering.

CAPABILITIES

LANGUAGES	Python · Bash · SQL
INFRASTRUCTURE	Ansible · Terraform · Docker · Kubernetes · Jenkins · Consul
CLOUD	AWS — EC2, VPC, RDS, Route53, S3, IAM, CloudWatch, CloudFormation · Boto3
SYSTEMS	Linux · FreeBSD · Nginx · Redis · RabbitMQ · Celery
SECURITY	Zero-trust / BeyondCorp · SAML · OAuth · Kerberos · LDAP · SSO & RBAC
OBSERVABILITY	Elasticsearch · Logstash · Kibana · PostgreSQL · Nagios · Sensu

EDUCATION

2026-09	XCS224N · Natural Language Processing with Deep Learning Stanford Online · credential ↗
2017 — 2019	Master of Business Administration William Jessup University
2015 — 2016	Masters in Computer Science Silicon Valley University
2006 — 2010	Bachelors in Information Technology JNTU, Hyderabad
